Mines and Mining Stocks

Will Develop Ground Which Already Shows Important

years done considerable prospecting work with excellent results, the Death Canyon Mining company, of which Henry E. Browne, of this city is the principal owner, is about to inaugurate principal owner, is about to inaugurate active development of its property in Ereckson district. The work is to be in charge of W. H. Goss, a mining man of large experience in Utah districts, and he has accepted the commission only after having made a thorough examination, which convinces him that relatively little additional work will open a valuable mine. open a valuable mine. In the company's tunnel is a full

face of silver-lead ore of commercial grade. It is the intention to follow that ore about 120 feet, to its inter-section with a cross-fissure which has on the surface a fine showing of ore carrying values of \$46 and \$52 a ton. The cross-fissure will then be followed into the heart of the mountain, where will be attained a depth of 700 feet from the surface.
The formation is so strong through-

out, with its extensive system of highly mineralized veins that no doubt is entertained that large bodies of ore of unusually high grade will be found. And it is believed that the results to be attained will direct a great deal of new attention to the Breckson dis-

OHIC COPPER IS MINING HIGHER GRADE OF ORE

Reports which come from Bingham indicate that the Ohio Copper com-pany, if left alone for a time as to its practical operations, will finance itself. In blocking out for mining by the caving system a great ore body like that in the Ohio Copper company's mine, it is necessary to do a great deal of work in what might be termed the ragged edges of the ore body. It was largely from such work that the company's first three months' production was made. The miners are beginning to get into the real ore body now, it is averred, and the grade of ore sent to the mill is much higher than any that has been mined before. At the same time the efficiency of the mill has been stadily inversed than At the same time the efficiency of the mill has been steadily improved upon. and most satisfactory results of concentration are being achieved. The one-half of the mill in operation is handling close to 1,400 tons of ore a day; a high grade of concentrates is being turned out and the earnings of the company, it is believed, have increased accordingly.

"If its for the office Breeden has it."

Fountain Pens

> for vacation trips. Just the thing for mountain or seaside. Don't leave without one-you'll all makes with all each writer. A perma-nent, practical conveni-ence—evin when you're at home. Very few people nowadays who will not use a fountain pen. You'd better be up-to-the-minute and buy one.

> > Tomorrow

The abnormal character of the situation is illustrated by the case of Colorado, which, after having just paid a quarterly dividend of 8 cents a share, is said to have \$200,000, or 20 cents a share, in its treasury, while production, as well as prospecting for new ore bodies, is being continued. Colorado may be hearing the end of its demonstrated ore bodies, but it should be worth 30 cents a share as a prospect, without considering its ore in sight, its cash in treasury and its extensive equipment. The prices to which iron Biossom and Sioux Consolidated dropped were, perhaps, no less out of harmony with the value of their holdings and resources. Iron Blossom, in fact, is said by experts to have developed in cash in treasury and its extensive equipment. The prices to which Iron Resources.

Resources.

UNCLE SAM MAILS

Cash and May Day Stock Go Today to Fortunate Holders.

Checks for the June cash dividend of two cents a share, together with certificates of stock of the May Day company in settlement of the stock dividend will be mailed Monday to stockholders of the Uncle Sam Consolidated Mining company. The total stock dividend is for 400,000 shares of May Day, Dolores Dolores

The 400,000 shares of May Day stock Greene-Cananea . . . had been held by Uncle Sam in its treasury since it was received in pay-ment for property purchased, but it became evident that it would prove more satisfactory to distribute the

more satisfactory to distribute the May Day holdings among individual stockhoiders of Uncle Sam.

On account of the peculiar condition of the stock market the announcement of the stock market the stock market the announcement of the stock market the stoc of the stock market the announcement of the distribution appeared to weaken Uncle Sam marketwise, rather than strengthening it, as it might have been expected to do; while the assessment on May Day caused that issue to drop to one cent a share. May Day owns a mill and is producing enough ore to a little more than pay operating expenses. In prosecuting a deep-mining campaign the company acquired an overdraft, however, which was not being reduced rapidly enough. In addition it is desired to purchase machinery required for further prosecuting the deeper work, which was suspended. Leasers, following the ore pended. Leasers, following the ore opened on the 1,000-foot level of the rine, have been making shipments f om it, and there is good indication that an important body of ore will be opened below that level.

UTAH GOLD AND COPPER SHIPS MILL MACHINERY

Machinery for the new concentrating mill which is to be installed upon the property of the Utah Gold & Copper company in Beaver county, is to be shipped to the mine Monday. Development of the ore bodies is progressing satisfactorily, and the mine should be in good producing form within ninety days, or as soon as the mill can be placed in commission.

Father and Son Operate Clift Mine With Excellent Results.

That the Silver City district, south of Tintic, is deserving of more attention from mining men than it has eve berg, owner of the Clift mine, who was in this city yesterday settling for a carload of ore which he had just delivered at the smelter. Mr. Thornberg is doubtless better qualified than any one else to speak of the possibilities of Silver City, for he has been mining there the last 16 years. He is not operating upon a large scale, but he and his son—with no payroll outside of the family—have for some time been shipping one and two carloads of ore every month and at the same time doing considerable work in the Clift mine. ing considerable work in the Clift mine. Stoping is being done upon a fissure Stoping is being done upon a fissure four feet and seven feet wide, which carries ore averaging around 30 per cent lead and 12 ounces in silver to the ton. The fissure, where opened by a tunnel which attains a vertical depth of 300 feet, is in porphyry. But a development tunnel, which has been driven 1.400 feet, is in limestone, showing that the porphyry is an overflow.

The deeper tunnel is being driven to get under the old Cliff workings, from which a great deal of rich galena ore was shipped in the early 70s. About 250 feet of driving remains to be done to reach the objective point. On done to reach the objective point. On progressing nicely, account of the indications that the vein from which was produced the richer ore is in limestone formation, gratifying results are anticipated from opening it at depth.

BAY STATE INCORPORATES. Provo, June 18.—The Bay State Mining & Development company has filed
articles of incorporation with the county cierk. Provo City is the principal
place of business. The capital stock
is \$50,000 in shares of the par value of
cents each, based on the valuation of
a group of 19 mining claims in American Fork district. Directors and officers: John Cleghorn, president; J. F.
Noyes, vice president; George B. Tayior, S. W. Nielsen, J. W. Storrs, secretary and treasurer. 4.25 4.373 4.00 4.50 tary and treasurer.

You cannot get a good weather and waterproof roof for your building from a poor roofing.

The roof of your building is the most important part of it and unless your roofing is right, there will be no peace of mind for those who live under it.

A roof that leaks causes no end of trouble, besides a lot of damage.

The best way to protect yourself from these unnecessary troubles, is to use Malthoid Roofing.

Malthoid Roofing is made in the largest and best equipped roofing factory in the world. The men who make it have been making roofings for twenty-six years and they understand what is necessary to make a roofing which will give perfect satisfaction, no matter how it is used, under what conditions.

The makers of Malthoid Roofing guarantee it to be a perfect roofingto give perfect satisfaction and to last as long as the building it covers, provided it is properly laid and ordinary care is taken of it.

Twenty-six years of experience enables the makers to guarantee under these conditions.

To be absolutely sure that you have no roofing troubles, buy Malthoid and lay it properly.
